Note 1: A margin of error (MOE) is the difference between an estimate and its upper or lower confidence bounds. Confidence bounds can be created by adding the margin of error to the estimate (for an upper bound) and subtracting the margin of error from the estimate (for a lower bound). All published margins of error for the Small Area Health Insurance Estimates program are based on a 90 percent confidence level.

Note 2: The number in a demographic group is the number of people in the poverty universe in that age, sex, and race/Hispanic origin group.

Note 3: Values for Kalawao, HI (15-005) should be considered N/A or missing.

Note 4: MOEs of zero should be assumed to be <1 for counts and <0.1 for percentages.

General Note: Details may not sum to totals because of rounding
